

Scheduling Dynamics, Inc.

WorkForce: Automated MPT

Consolidate your MPT data gathering and reporting

Web-based entry, tracking, and reporting of your labor standards, volume standards, forecasts, activity plans, traffic history.

Manage your planning and reporting based on your organizational structure

Organizational levels and reporting views mirror your organizational structure. Spend minutes, not hours, producing a schedule for your entire staff.

Create your staff schedule based on the three most important variables:

What ... are the tasks that are most critical during the day?

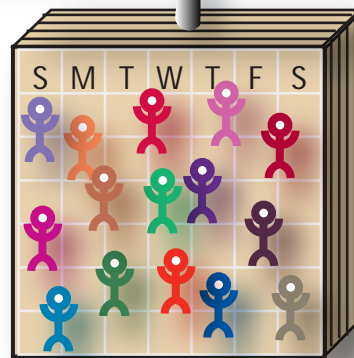

Who ... are the best employees to complete these tasks?

When ... are these tasks to be completed and is the staff available?

WorkForce utilizes your existing labor standards to create an optimized schedule. This schedule reflects the best possible staffing scenario to reduce costs and improve effectiveness.

WorkForce Electronic Scheduling will enhance productivity, improve customer service, reduce administrative and payroll costs. This is accomplished by simplifying tasks that are in effect today.

Assign manpower to activity assignments by department, by day, by hour, by assignment.
